

# Lab-4

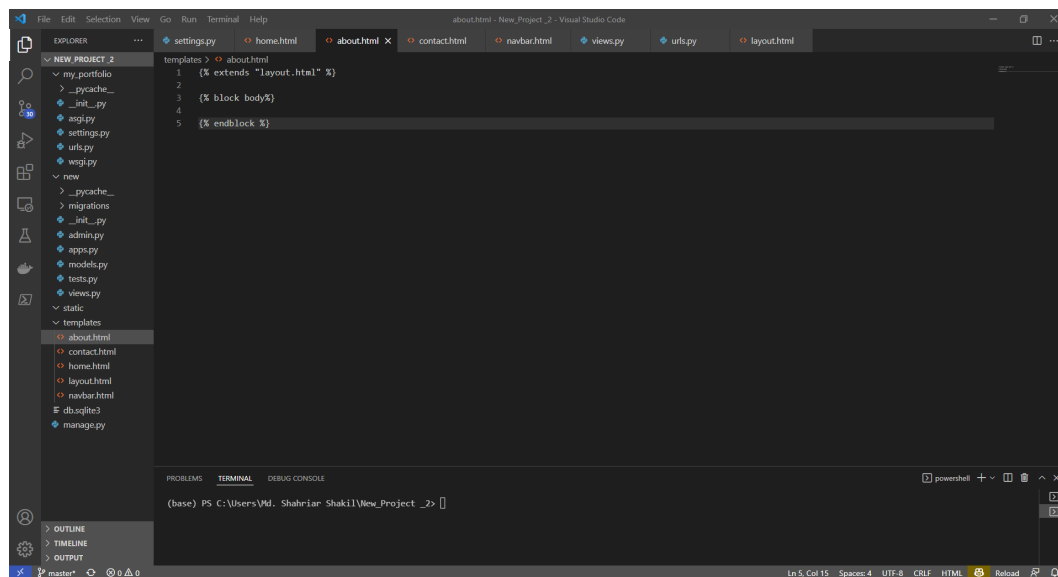

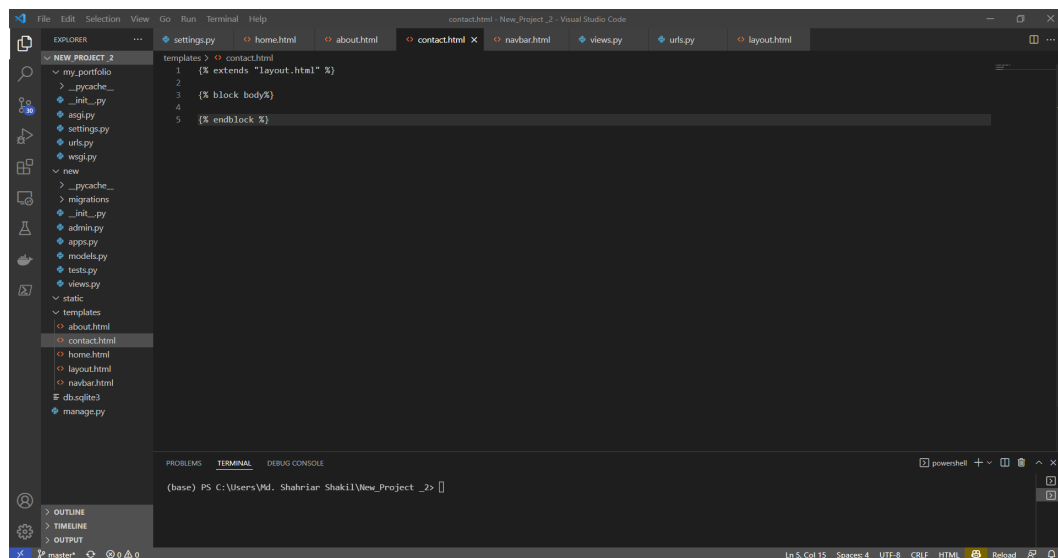

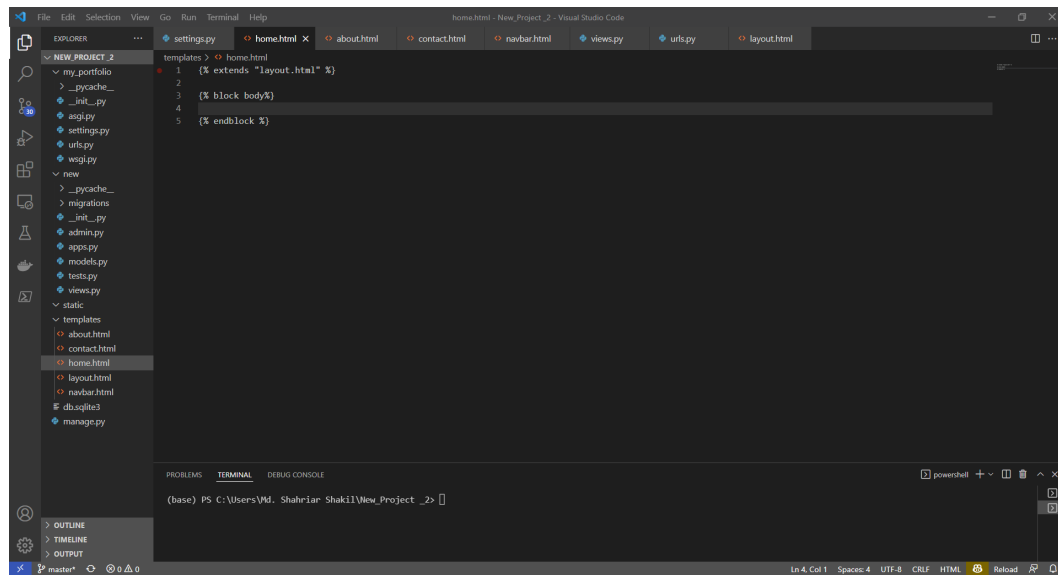

## Template Design

1. Today we design our html pages.
  - a. In layout.html paste this code in body tag

```
{% block body%}  
  
{% endblock %}
```

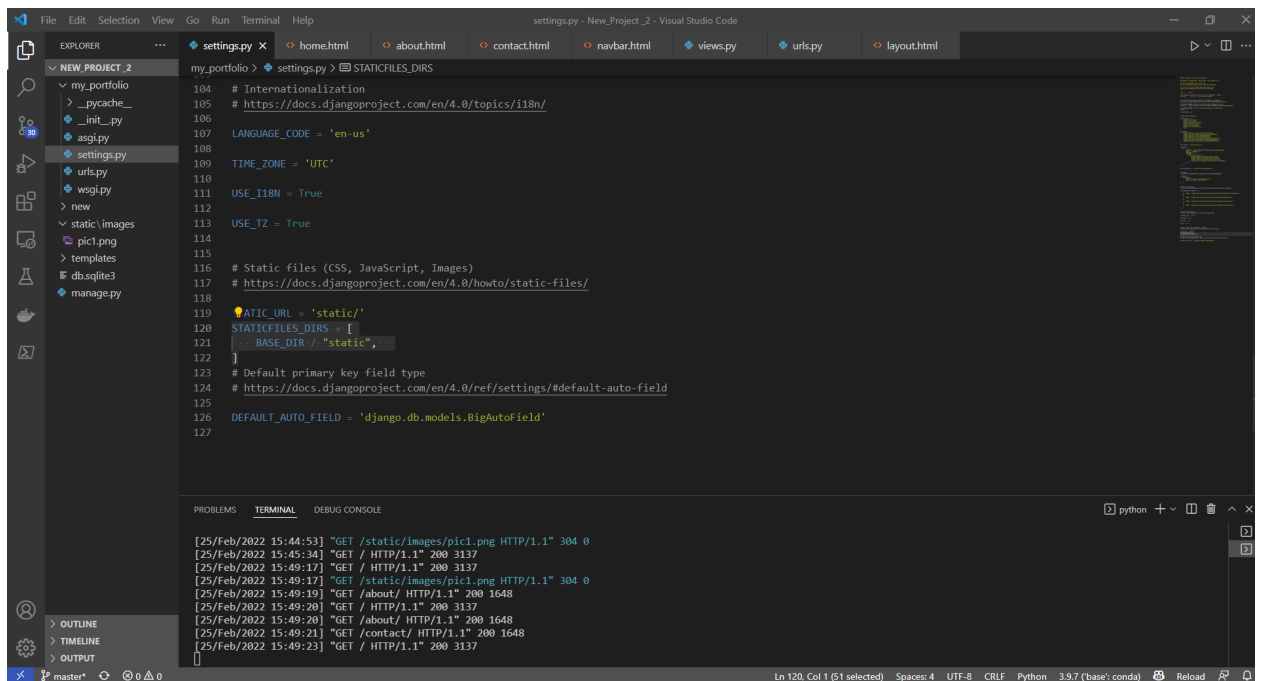

- b. Also we paste this code on the home.html, about.html, & contact.html.

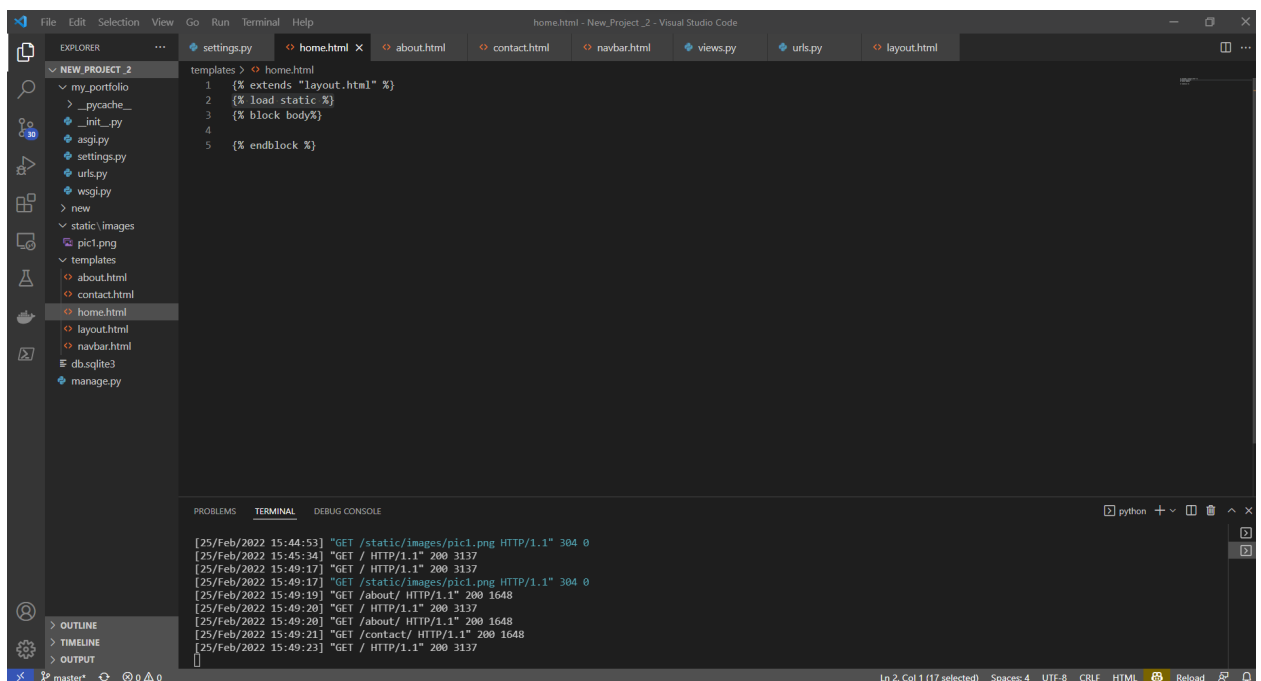

c. Now home,contact and about look like those

2. First we design our home page. We divided home page into 3 sections. Introduction, Work Experience, Skills
  - a. In introduction we add an image. For adding image we have to **created a folder inside the static folder called images**. Then which images we want to show move that image in the images folder.
  - b. Then we have to define static path in settings. Go to **my\_portfolio>settings**
    - i. Below STATIC\_URL paste this code

```
STATICFILES_DIRS = [  
    BASE_DIR / "static",  
]
```

- ii. In home.html in top we have to add `{% load static %}` this.

- iii. Now we have to write html code inside the **block body**. [Click here](#) for **home** html code & paste this code inside the **block body**.
- 3. Hopefully home page design complete. Now move on **about page**.
  - a. [Click here](#) for **about** html code & paste this code inside the **block body**.
- 4. Great we successfully completed home and about page design. Now we design our last html file that is **contact page**.
  - a. [Click here](#) for **contact** html code & paste this code inside the **block body**.

**Congratulations! Lab-4 complete. Thanks everyone.**
